

TONIC PUPIL

LINDA HANSAPINYO, MD
DEPARTMENT OF OPHTHALMOLOGY
FACULTY OF MEDICINE, CHIANGMAI UNIVERSITY

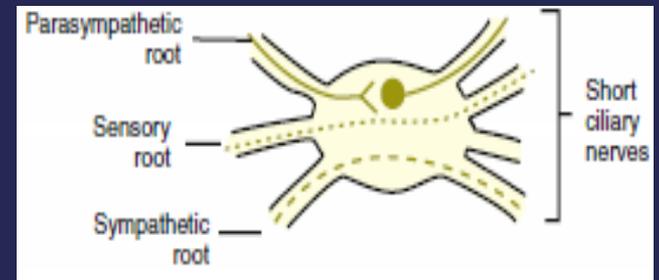

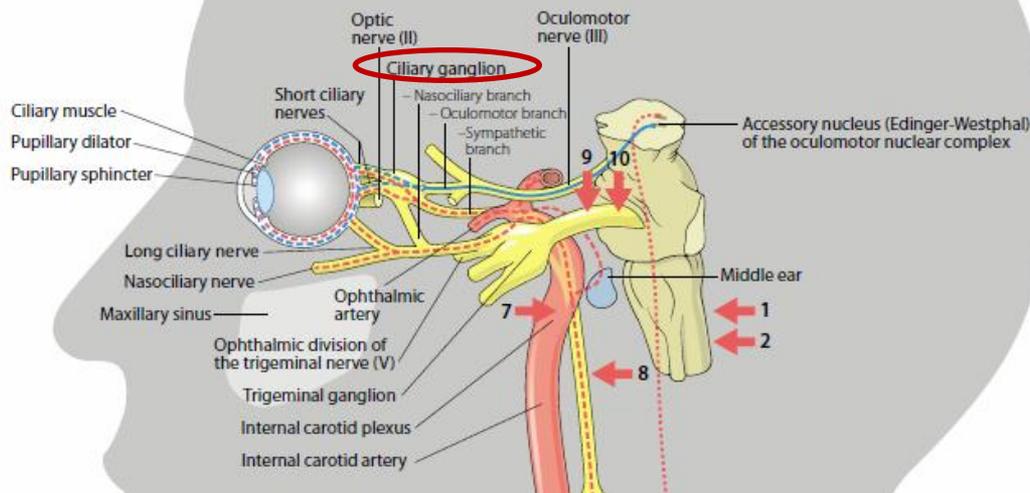

TONIC PUPIL

Damage to the ciliary ganglion and short ciliary nerves

retrobulbar part

intraocular part

suprachoroidal space

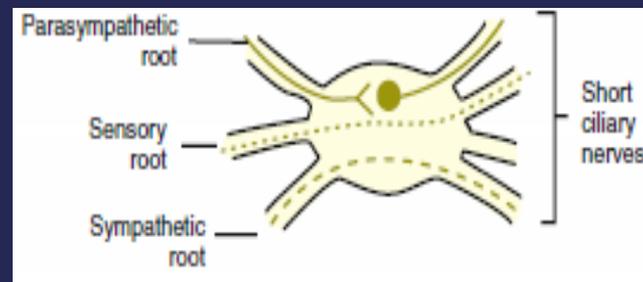

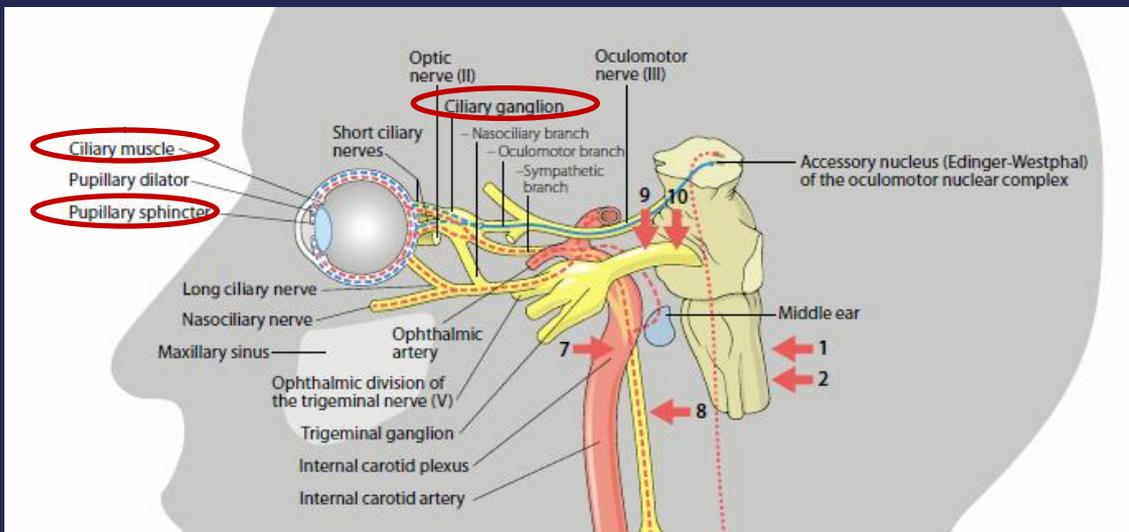

TONIC PUPIL

Damage to the ciliary ganglion and short ciliary nerves

retrobulbar part

intraocular part

suprachoroidal space

TONIC PUPIL

Damage to the ciliary ganglion and short ciliary nerves

Symptoms

Iris sphincter dysfunction

Ciliary muscle dysfunction

Photophobia

Difficulty with dark adaptation

Blurred near vision

Brow ache/Headache with near work

TONIC PUPIL

Damage to the ciliary ganglion and short ciliary nerves

Clinical signs

Internal
ophthalmoplegia,
anisocoria

Segmental
atrophy of iris
sphincter

Vermiform
movement of
pupillary
margin

Accommodative
paresis

Decrease
corneal
sensation

Light near
dissociation

Cholinergic
denervation
supersensitivity

TONIC PUPIL

Damage to the ciliary ganglion and short ciliary nerves

Clinical signs

Internal
ophthalmoplegia,
anisocoria

Segmental
atrophy of iris
sphincter

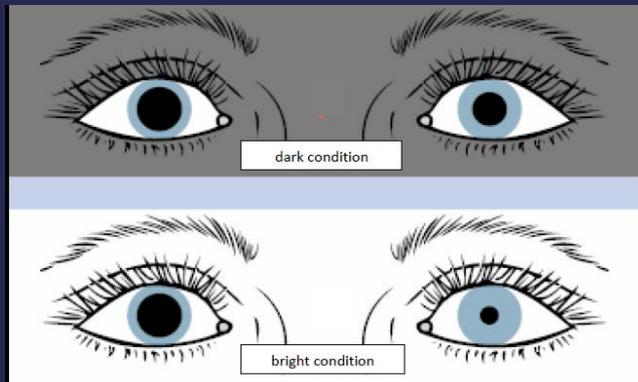

Vermiform
movement of
pupillary
margin

Accommodative
paresis

Decrease
corneal
sensation

Light near
dissociation

Cholinergic
denervation
supersensitivity

TONIC PUPIL

Damage to the ciliary ganglion and short ciliary nerves

Clinical signs

Internal ophthalmoplegia, anisocoria

Segmental atrophy of iris sphincter

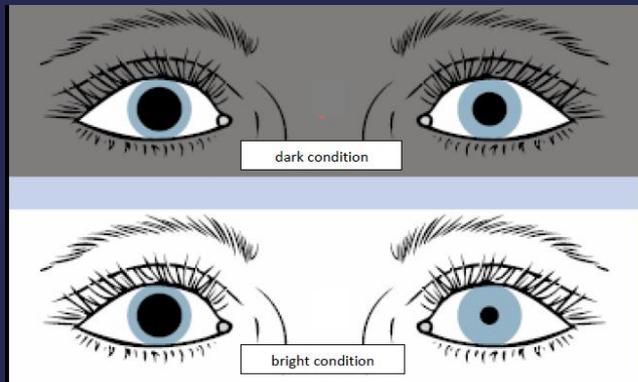

Vermiform movement of pupillary margin

Accommodative paresis

Decrease corneal sensation

Light near dissociation

Cholinergic denervation supersensitivity

Differential diagnosis

- ❖ Tonic pupil
- ❖ CN3 palsy
- ❖ Iris damage
- ❖ Pharmacologic mydriasis

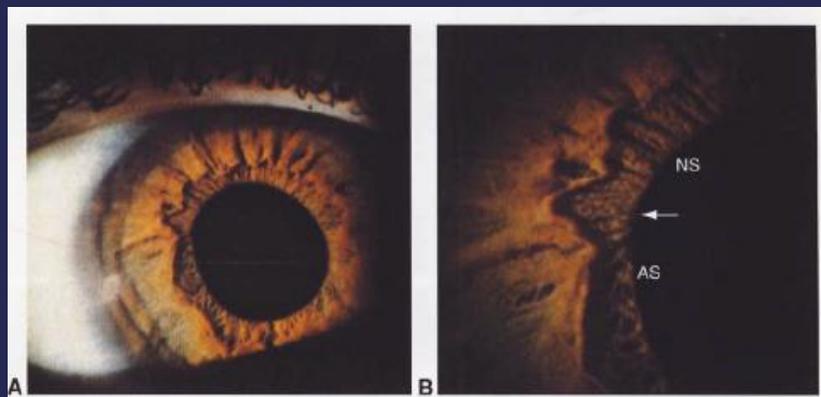

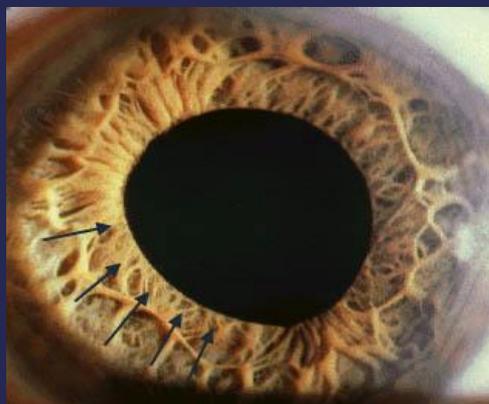

TONIC PUPIL

Damage to the ciliary ganglion and short ciliary nerves

Clinical signs

Internal ophthalmoplegia, anisocoria	Segmental atrophy of iris sphincter	Vermiform movement of pupillary margin	Accommodative paresis	Decrease corneal sensation	Light near dissociation	Cholinergic denervation supersensitivity
--------------------------------------	--	--	-----------------------	----------------------------	-------------------------	--

TONIC PUPIL

Damage to the ciliary ganglion and short ciliary nerves

Clinical signs

Internal ophthalmoplegia, anisocoria

Segmental atrophy of iris sphinctor

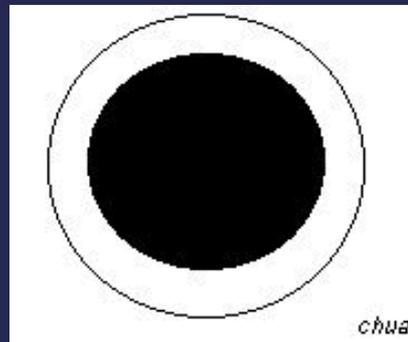

Vermiform movement of pupillary margin

Accommodative paresis

Decrease corneal sensation

Light near dissociation

Cholinergic denervation supersensitivity

chua

TONIC PUPIL

Damage to the ciliary ganglion and short ciliary nerves

Clinical signs

Internal ophthalmoplegia, anisocoria	Segmental atrophy of iris sphinctor	Vermiform movement of pupillary margin	Accommodative paresis	Decrease corneal sensation	Light near dissociation	Cholinergic denervation supersensitivity
--------------------------------------	-------------------------------------	--	-----------------------	----------------------------	-------------------------	--

- ❖ Acute: moderate to severe
- ❖ Gradually improves over several months: regeneration and reinnervation
- ❖ Recovery: the first 2 years after the acute injury

TONIC PUPIL

Damage to the ciliary ganglion and short ciliary nerves

Clinical signs

Internal ophthalmoplegia, anisocoria

Segmental atrophy of iris sphincter

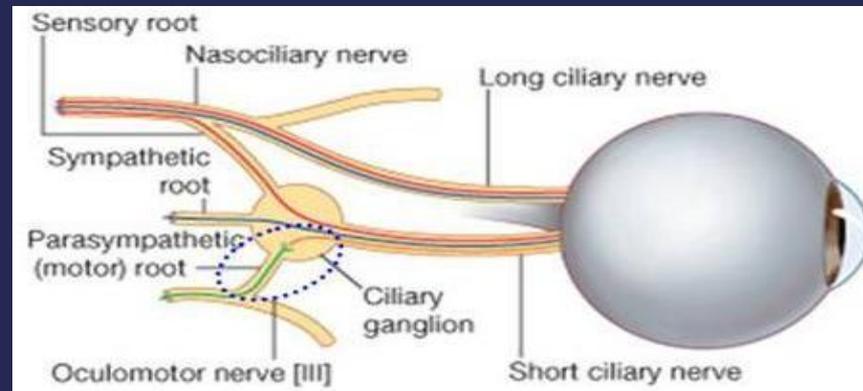

Vermiform movement of pupillary margin

Accommodative paresis

Decrease corneal sensation

Light near dissociation

Cholinergic denervation supersensitivity

TONIC PUPIL

Damage to the ciliary ganglion and short ciliary nerves

Clinical signs

Internal ophthalmoplegia, anisocoria

Segmental atrophy of iris sphinctor

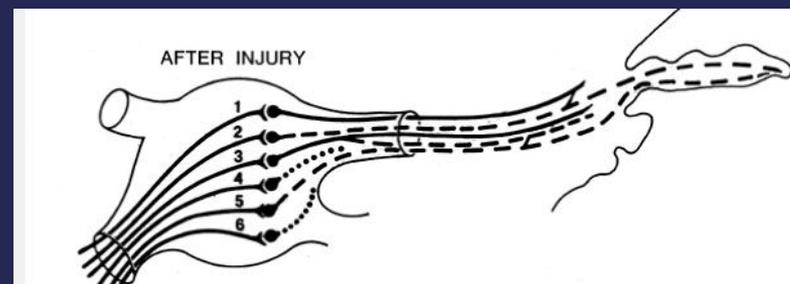

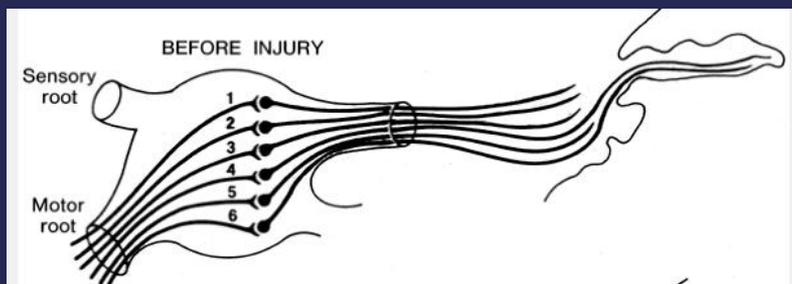

Vermiform movement of pupillary margin

Accommodative paresis

Decrease corneal sensation

Light near dissociation

Cholinergic denervation supersensitivity

TONIC PUPIL

Damage to the ciliary ganglion and short ciliary nerves

Clinical signs

Internal ophthalmoplegia, anisocoria	Segmental atrophy of iris sphinctor	Vermiform movement of pupillary margin	Accommodative paresis	Decrease corneal sensation	Light near dissociation	Cholinergic denervation supersensitivity
--------------------------------------	-------------------------------------	--	-----------------------	----------------------------	-------------------------	--

Differential diagnosis

- ❖ Severe loss of afferent light input to both eyes
- ❖ Loss of pretectal light input to EW nucleus
- ❖ Third nerve aberrant reinnervation
- ❖ PRP, retinal cryotherapy, orbital surgery
- ❖ Peripheral neuropathy
- ❖ Adie's tonic pupil

TONIC PUPIL

Damage to the ciliary ganglion and short ciliary nerves

Clinical signs

Internal ophthalmoplegia, anisocoria	Segmental atrophy of iris sphincter	Vermiform movement of pupillary margin	Accommodative paresis	Decrease corneal sensation	Light near dissociation	Cholinergic denervation supersensitivity
--------------------------------------	-------------------------------------	--	-----------------------	----------------------------	-------------------------	--

- ❖ Develop few days after nerve damage
- ❖ Iris constricted with weak Pilocarpine (0.0625- 0.125%) at 40-60 min, dim light
- ❖ Positive 80%

TONIC PUPIL

Damage to the ciliary ganglion and short ciliary nerves

Causes

Local

Neuropathic

Idiopathic
(Adie's pupil)

TONIC PUPIL

Damage to the ciliary ganglion and short ciliary nerves

Causes

Local

Neuropathic

Idiopathic
(Adie's pupil)

Orbital or systemic, isolated involvement of ciliary GG and short ciliary nerve

Unilateral

Infection: HZV, measles, diphtheria, syphilis, Lyme disease, scarlet fever, pertussis, influenza, sinusitis, hepatitis

Infammation: VKH, RA, PAN, GCA, lymphomatoid granulomatosis, chorioiditis

Trauma & Surgery: blunt/penetrating trauma, intraocular Sx, PRP, Cryotherapy

Tumor: primary and metastatic choroidal and orbital tumors

TONIC PUPIL

Damage to the ciliary ganglion and short ciliary nerves

Causes

Local

Neuropathic

Idiopathic
(Adie's pupil)

Wide spread, peripheral, and autonomic neuropathy

Bilateral

Syphilis, Chronic alcoholism, DM, SLE, Sjogren syndrome

Spinocerebellar degenerations

Amyloidosis, dysautonomias, Guillain-Barre syndrome, Miller Fisher syndrome

Paraneoplastic autonomic polyneuropathy

TONIC PUPIL

Damage to the ciliary ganglion and short ciliary nerves

Causes

Local

Neuropathic

Idiopathic
(Adie's pupil)

Idiopathic, uncommon, sporadic

Unilateral 80%, F>M, 20-50 yrs

Holmes Adie syndrome: Adie's pupil + areflexia

Fellow eye: 4%/year

Long standing: smaller with time, bilateral

TONIC PUPIL

Damage to the ciliary ganglion and short ciliary nerves

Causes

Local

Neuropathic

Idiopathic
(Adie's pupil)

Idiopathic, uncommon, sporadic

Unilateral 80%, F>M, 20-50 yrs

Holmes Adie syndrome: Adie pupil + areflexia

Fellow eye: 4%/year

Long standing: pupil smaller with time, bilateral

TONIC PUPIL

Damage to the ciliary ganglion and short ciliary nerves

Investigations

Blood tests

Neuroimaging: MRI

TONIC PUPIL

Damage to the ciliary ganglion and short ciliary nerves

Treatment

Photophobia, cosmetic: weak Pilocarpine eyedrop

Accommodative paresis: bifocal glasses
